

Independent Learning in Cam Tech Level 3 IT

Consolidation – after every lesson
• Review your class notes and summarise key terminology • Update and annotate your coursework drafts with teacher feedback. • For exam units, ensure you are familiar with key terms • Practise applying theoretical knowledge to scenario-based questions • Attempt short-answer or exam-style questions to reinforce understanding. • Keep on top of your assignment due dates on Teams.
Formal home learning
• Complete practice questions from past papers or sample assessment materials (Unit 1 and Unit 2). • Write practice responses for “case study” style questions that require application to a scenario. • Conduct independent research into topics such as emerging technologies, cybersecurity threats, or legislation updates. • Prepare detailed research notes and references for coursework units (e.g. NEA units). • Review exemplar materials from OCR to understand assessment criteria and improve your work. • Practise writing evaluative and analytical responses (e.g. pros and cons of using cloud storage, impact of poor security).
Wider reading and extension
• CS Newbs is great for all units of Cam Tech for exam units especially Unit 1 and Unit • Cambridge University outreach lectures (on digital ethics, AI, big data) – for context and wider understanding.
